

THE Training Track

CICP (Contractor Installation Certification Program)

CICP is all about a commitment to quality. The main objective of this program is to provide each Builder and Roofing Contractor the information, skills and competency required to supervise on-site installation so that the end-product qualifies for the industry leading warranty program offered by American Buildings Company and Architectural Metal Systems.

Each two and one half day workshop is packed full of valuable information. Beginning each day in the classroom, you will learn the critical elements of quality installation. You will also learn how to monitor your crews during product installation to assure yourself and your customer a quality end product that will distance your company far beyond your competition. The afternoon sessions of your program include the actual assembly of full scale roofs. During these sessions you will be under the direct supervision of experienced roofing professionals in an indoor laboratory setting designed especially for product installation training.

You and your fellow classmates will have the chance to build hips, roof-to-wall interfaces, ridge assemblies, panel end laps, trim lines and virtually every other condition that

represents the real world conditions of retro-fit and architectural metal roofing. You are also provided an opportunity to examine special products and conditions like those you will see on your job-sites.

HURRY!!!

In order to assure everyone that attends an opportunity to fully participate in the program work sessions, space is limited to a specified number of customer participants. CICP program rosters fill quickly – so sign-up today!

"This training is worth it's weight in gold. It's helped us grow our business."

You will have an opportunity to reflect on each of your three carefully designed work sessions as they are inspected by professionals with the same demanding standards that will be used in the field inspection of your projects. Throughout your program you will have the opportunity to exchange information with your workshop directors about specific project related issues and learn from the highly experienced staff that supports your learning opportunity.

Even the lunch sessions are designed for learning and building your relationship with American Buildings Company and Architectural Metal Systems. Each day, you and your people will have the opportunity to meet and talk with the customer support personnel, engineering and staff that serve your company. CICIP is an opportunity you do not want to miss!

Successful completion of the CICIP Program earns you and your company the right to proudly claim membership among the industry's most highly respected roofing contractors. Successful completion of CICIP also earns you the privilege to promote and sell one of the most advanced and sought after labor and material warranty programs * found anywhere in the construction industry.
